Five minutes minimum mixing on a mechanical shaker is required for complete mixing of color.  Tinting is not recommended for immersion service.  Quik-Kick Epoxy Accelerator is acceptable for use. See data page for details.  Acceptable for concrete floors.  When spraying a surface above 120°F (49°C), reduce material 10% with Reducer #100. Spray apply only. Product will produce an orange peel appearance when applied at elevated temperatures.  Topcoating: It is recommended to apply a thinned-down, low wet film thickness mist coat over zinc rich primers to help avoid outgassing. Allow it to tack up and seal the surface. Then apply a full wet film thickness coat as directed.  Mix contents of each component thoroughly with low speed power agitation. Make certain no pigment remains on the bottom of the can. Then combine one part by volume of Part A with one part by volume of Part B. Thoroughly agitate the mixture with power agitation. Allow the material to sweat-in as indicated prior to application. Re-stir before using.
*Reduction.....As needed up to 10% by volume
